

# Signatures for Quick Base

## Capture Signatures for your Quick Base Records

Electronically Sign Quick Base records and store the captured signature image in a file attachment field.

If you are looking to **capture a signature** and **attach the saved image** to a record in your Quick Base application, **Signatures for Quick Base** can help you achieve that functionality. We also give you the option of capturing additional data from the signer.

## Highlights of Signatures for Quick Base

- ✓ Capture signatures as image files and store them in file attachment fields
- ✓ Require a Name and Title to be entered by the signer
- ✓ Require the signer to view a terms file before signing
- ✓ Store the Terms file for review by the signer in a file attachment field on the same record or in a Document Library table
- ✓ The Terms file can also be a file created using **Exact Forms Plus** so it can be personalized for the signer
- ✓ Works great on mobile devices

Q8 Signature - Google Chrome
