

PDF Merger

Join multiple documents into a single PDF File

Highlights of PDF Merger

- ✓ Documents can come from **any table** and from **any number of tables**
- ✓ **Word, Excel and Image** files can also be included in the merged file
- ✓ PDFs can also come from different records in separate Quick Base tables
- ✓ Merge files from multiple records using a filtered **Quick Base** report
- ✓ Create a document package using a template including a cover page and divider pages
- ✓ We can also allow the files to come from and publish to Amazon S3
- ✓ Combine this with **Exact Forms Plus Batch Processor** and generate multiple documents merging them in the order needed for printing or sending i.e. build a “Document Package”
- ✓ PDF Merger **Batch Processor** allows you to “trigger” this process when a field on the record changes. For example, after you’ve generated multiple documents using Exact Forms Plus, trigger the PDF Merger to combine all your documents into one file
