

Documentor for Quick Base

Create Detailed Documentation for your Application

Are you worried about your Quick Base Application version control or schema changes?

Documentor for Quick Base was designed to provide Quick Base application administrators with the ability to easily generate Quick Base database documentation. You can **create documentation** in **Microsoft Word/PDF** or view the information in a familiar Quick Base application format. Information about **tables, fields, report definitions, relationships, roles and users** are automatically included, and you can add further notes about your Quick Base as needed. Documentor for Quick base is ideal for anyone who needs to quickly produce high quality Quick Base database documentation.

Your
Quick Base Application

New Documented
Quick Base Application

Highlights of the Documentor

- ✓ **Save time** by automatically generating documentation with a weekly/monthly Scheduled Creation process
- ✓ **Eliminate** tedious and time-consuming manual documentation tasks
- ✓ **Satisfy audit requirements** by logging any/all changes to your applications schema
- ✓ **Formula URL field** documentation – create a report detailing the formula code for all fields in each table in your application
- ✓ **Keep track of field** changes including current and previous formula properties in each version of documentation
- ✓ **Report** on any/all modifications to your Quick Base application schema with automatic versioning
- ✓ Keep **teams up to date** with a Documentation application in a familiar Quick Base format
- ✓ **Explorer-like** tree view of your documented application for easier analysis.
