

Email Parser

Convert Email messages into Quickbase Data

Extract specific data from both the subject and body of incoming email messages and convert unstructured email information into structured Quickbase data with ease, ensuring that critical information is organized and readily accessible. Say goodbye to manual data entry and hello to automated efficiency!

Key Benefits:

Automate Data Entry From Emails

Effortlessly automate the transfer of parsed email data into your Quickbase records, reducing errors and saving time.

Save Email Attachments in Quickbase

Effortlessly store file attachments from inbound emails directly in your Quickbase application.

Query and Update Data Record Seamlessly

Search and update existing records automatically based on data parsed from email, further streamlining your data management.

Product Features:

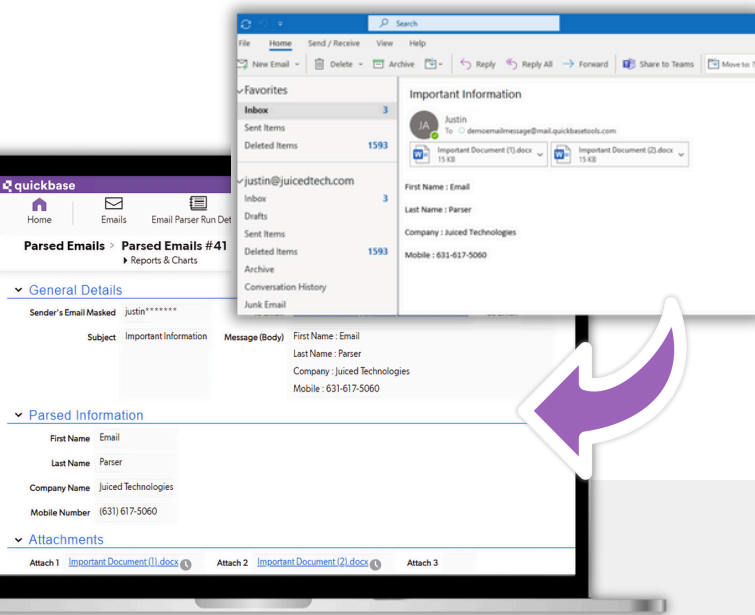

- Keep track of email conversations from log enabled fields in Quickbase.
- Find related records based on data present in the email body or subject line.
- Organize data from different web forms sent via email into one central location.
- Automatically enter and track info from Contact forms or lead capture emails.

Commonly Paired Add-Ons:

- **EZ File Importer:** Automatically upload data from inbound spreadsheets into your application.

Common Use Cases:

- ✓ Streamline Order Fulfilment
- ✓ Contact Form Intergration
- ✓ Lead Generation
- ✓ Extract data from Purchase Orders
